1. Given,
 $A = -52$
 $B = +19$

Step 1: Binary (convert)

$+52 = 00110100$
 -52 (2's Complement)

- 00110100
- 11001011 (1's complement)
- 11001100 (2's Complement)

So,
 $-52 = 11001100$
 $+19 = 00010011$

(a) Addition:-

$$\begin{array}{r} 11001100 \\ + 00010011 \\ \hline 11011111 \end{array}$$

Result = 11011111

2's complement of 11011111

- 00100000
- $+1$
- $00100001 = 33$

$= -33$
